## **EGL Water ready to pilot innovative Water Treatment Technology**

The Board of The Environmental Group Limited (ASX: EGL) is pleased to announce positive results in the testing/pre-market phase of EGL Water patented technology.

This unique innovative water treatment system with processes developed by EGL has undergone rigorous testing by research partner Victoria University (Institute for Sustainability and Innovation). The system has been found to be capable of very high destruction rates of PFAS using a unique ground-breaking technology that may revolutionise the treatment of PFAS contamination.

These positive results indicate strong market potential for treatment of PFAS contaminated sites. The agile system also represents a cost-effective solution for PFAS contamination.

With scientific validation through Victoria University EGL Water is now seeking partners for commercial pilot opportunities. The Board has analysed related market implications and anticipates a successful market launch with commercial returns in 2020.

### **About EGL**

EGL has four business units, all committed to the protection of the environment by improving air quality, reducing carbon emissions, enhancing waste to energy production and lifting water quality.

- **Total Air Pollution Control** has a range of technologies which reduce dust, odours and harmful gasses from the environment.
- **Baltec IES** produces inlet and exhaust systems for gas turbines, which are used to complement and augment solar and wind energy production, without the use of rare mineral battery resources.
- **Tomlinson Energy Service** division is an essential link in our strategy to build a bio/waste to energy platform.
- **EGL Water** division continues to develop our patented technologies in conjunction with Victoria University. EGL recognises that one of the world's most valuable assets is water and will persist in our vision to reduce water pollution, leading to an improved environment, through low cost technology solutions.
