Total Air Pollution Control (TAPC) secures a \$5.2M Contract for the design and supply of emissions control system.

The Environmental Group Limited (EGL) is pleased to announce that its wholly owned subsidiary TAPC has secured a material contract for the design and supply of acid roast kiln off gas treatment systems with FLSmidth Pty Ltd for a lithium refinery.

TAPC has designed a state of the art emissions control system using gas scrubbers to minimise the environmental impact of the plant by treating the off-gases generated by the acid roast kiln. The off-gas scrubbing system will be an important element of the refinery process, as it will allow the plant to meet stringent air emission limits. The process design of the scrubbing system is based on multiple gas conditioning and treatment stages, to address different pollutants, and focuses on providing the high level of reliability required for a critical area of the refinery process.

EGL's Chief Executive Officer Mr Jason Dixon said "after working for months to design a unique technical solution, our engineering team should be very proud; they have been able to achieve a world class solution for the project. TAPC has again been able to prove they are a leader in designing gas treatment systems that protect our environment.

The agreement is a fixed price contract for approximately \$5.2M for the design, supply, and commissioning of the systems and is budgeted to be completed within the next 12 months.

This announcement has been authorised for release by the Board.

About EGL

EGL has five business units, all committed to the protection of the environment by improving air quality, reducing carbon emissions, enhancing waste treatment, and lifting water quality.

- **Total Air Pollution Control** offers a range of industrial air pollution control technologies that prevent harmful gasses, particulate matter, and odours from being discharged to the environment.
- **Baltec IES** produces inlet and exhaust systems for gas turbines, which are used to complement and augment solar and wind energy production, without the use of rare mineral battery resources.
- **Tomlinson Energy Service** offers a network of service offices across Australia providing 24/7 service, maintenance and repairs of both proprietary equipment and other OEM equipment. The division also provides an essential link in our strategy to build a bio/waste to energy platform.
- **EGL Water** division continues to develop our patented technologies in conjunction with Victoria University. EGL recognises that one of the world's most valuable assets is water and will persist in our vision to reduce water pollution, leading to an improved environment, through low-cost technology solutions.
- **EGL Waste Services** provides the sales and services platform for the exclusive Turmec Agency agreement in Australia, Turmec are specialists in recycling solutions for the global waste industry, providing bespoke systems that enable their customers to efficiently recover high-quality material from waste, reducing the need for landfills.
