Technology for the future.  
GERMAN QUALITY VALVES

**NEW**  
from ARI!

# Profit from the many novel features of ARI systems for steam and condensate!

**e.g. PREsys®...**  
... for safe pressure reduction and adjustment  
(with ARI-PREDU® or ARI-STEVI®).  
Optional: Bypass with ARI-FABA® and orifice plate.

**e.g. CORsys®...**  
... for unrestricted return of the condensate.  
With digital indication of the condensate temperature  
on the integrated pump and level control.

**e.g. ENCOsys®...**  
... for waterhammer-free heat exchange of steam to  
water through steam or condensate pending control  
(with ARI-STEVI® or ARI-TEMPROL®).

**e.g. feedwater tank with deaerator dome...**  
... for supplying returned condensate and fresh water to  
the boiler via the deaerator dome and the feed  
water tank. The exceptionally durable design of the  
boiler is achieved by removing inert gases from the  
condensate / fresh water.
