PFAS

FOREVER CHEMICALS IN OUR ENVIRONMENT

PFAS are man-made chemicals found in products, waste, and water that don't break down. They can accumulate in our soil, waterways, and even our bodies.

Your local council, in partnership with The Environmental Group, is working to remove PFAS from wastewater, soil, and biosolids.

Together, we can create a **PFAS-free future.**

CLEAN WATER, HEALTHY COMMUNITIES

PFAS can contaminate water supplies through landfill leachate, wastewater, and firefighting foams.

Your local council, in partnership with The Environmental Group, is working to remove PFAS from wastewater, soil, and biosolids.

Together, we can create a
PFAS-free future.

Protecting Today, Securing Tomorrow

PFAS are called “forever chemicals” because they stay in the environment for decades.

Your local council, in partnership with The Environmental Group, is working to remove PFAS from wastewater, soil, and biosolids.

Together, we can create a
PFAS-free future.
